Researching adolescent abortion care-seeking in sub-Saharan Africa

Ernestina Coast

e.coast@lse.ac.uk

http://personal.lse.ac.uk/coast/

Options Consulting, 9th July 2019
5 projects

- Conceptual framework: trajectories of abortion-related care
- Trajectories of abortion [Zambia] [ESRC/DFID]
- Conscientious objection to abortion [Zambia]
- Improving adolescent access to contraception and abortion-related care in sub-Saharan Africa: health system pathways [Ethiopia, Malawi, Zambia] [on-going] [MRC/DFID] [Ipas]
- Economics of abortion [systematic review]
Adolescents are...

- more likely to have an unsafe abortion and to experience complications (including death) of unsafe abortion compared to older women

- less likely to be able to access safe abortion services compared to older women because:
  - lower levels of knowledge about sexual health / pregnancy confirmation
  - lower access to financial resources
  - lower levels of service knowledge
  - higher likelihood of delaying care-seeking
  - lower ability to navigate health systems
  - higher levels of stigma
Barriers to accessing services are especially high for adolescents unused to navigating a health system on their own.
CONCEPTUAL FRAMEWORK
[COAST (LSE), NORRIS (OHIO STATE), MOORE (GUTTMACHER), FREEMAN (LSE)]
How we produced it

**Consultation** with expert abortion researchers to shape initial framework

**Presentation** of the conceptual framework for further testing, scrutiny, review and revision

Literature systematically searched to identify examples to **test** the framework’s applicability and increase its specificity
• The boundaries between the components and levels are not as clear as presented by the framework

• However, it offers a **departure point** for new research by drawing attention to primary components and linkages in describing and explaining girl’s and women’s trajectories to abortion decision-making and behaviour

• Encourages a more holistic ways of understanding the trajectories of girls and women seeking abortion-related care

• The framework should be **continually tested** against new evidence and adapted to meet previously undocumented and/or unexpected abortion-seeking experiences
TRAJECTORIES OF ABORTION [ZAMBIA] [ESRC/DFID]

https://zambiatop.wordpress.com/
Government hospital
112 women

11 (15%) receive referral

71 (63%) report going straight to hospital

Government hospital
“I called a friend, I explained my situation ... she gave me a [hospital] doctor's number, who I called.”
112 women

71 (63%) report going straight to hospital

11 (15%) receive referral

Government hospital
112 women

First attempt

14 (34%) attempt TOP with non-hospital clinical methods
24 (59%) attempt TOP with non-clinical methods

Second attempt

2 (50%) attempt TOP with non-hospital clinical methods
2 (50%) attempt TOP with non-clinical methods

4 (11%) seek an alternative method

Government hospital

No information about 3 (7%)

71 (63%) report going straight to hospital
41 (37%) visit different providers
11 (15%) receive referral
34 (89%) go to hospital
22 (65%) receive referral
4 (11%) seek an alternative method
14 (34%) attempt TOP with non-hospital clinical methods
24 (59%) attempt TOP with non-clinical methods
4 (11%) receive referral
2 (50%) attempt TOP with non-clinical methods
1 attempts third non-clinical TOP

Includes 2 ambiguous cases
“after two weeks when I started wondering if I was rotting ... That started worrying me a lot ... [I] went to [local clinic]. I explained to them something else because I was scared to tell them that I did something...”
112 women

71 (63%) report going straight to hospital

Includes 2 ambiguous cases

11 (15%) receive referral

41 (37%) visit different providers

No information about 3 (7%)

34 (89%) go to hospital

22 (65%) receive referral

Government hospital

Second attempt

2 (50%) attempt TOP with non-hospital clinical methods

11 (15%) receive referral

41 (37%) visit different providers

“...I was given something to insert....I was given medicine, a stick”

2 (50%) attempt TOP with non-clinical methods

1 attempts third non-clinical TOP

2 (50%) receive referral

4 (11%) seek an alternative method

24 (59%) attempt TOP with non-clinical methods

2 (50%) receive referral

71 (63%) report going straight to hospital
Percentage of women by abortion trajectory, type and age

- Safe abortion
- PAC after MA initiated elsewhere
- PAC after unsafe abortion

% women sought abortion

CONSCIENTIOUS OBJECTION TO ABORTION [ZAMBIA]
Conscientious objection in our study

• Following previous research:
  Defined as any healthcare worker who feels that “her or his moral, ethical, or religious beliefs precluded her or him from being willing to perform or assist abortions in some or all situations” (Fink et al. 2015)

• Reflecting participants’ understandings:
  Definition extended to healthcare workers who feel that their own or their community’s objection to abortion preclude them from being willing to refer for abortion in some or all situations
Importance of others’ perceptions

- In rural facilities perceptions of communities’ attitudes prevented providers referring for or performing abortion.

\textit{e.g.}

A midwife at a rural health care centre, not currently providing abortion services but thought that safe services should be available. She was preoccupied with the case of a pregnant 12 year old girl, brought to the health centre by her father and the police after she was defiled by an older neighbour. Because the local police, the girl’s family and her colleagues did not know abortion was possible, she probably would not raise the option with them.
IMPROVING ADOLESCENT ACCESS TO CONTRACEPTION AND ABORTION-RELATED CARE IN SUB-SAHARAN AFRICA: HEALTH SYSTEM PATHWAYS

[Ethiopia, Malawi, Zambia] [on-going] [MRC/DFID] [Ipas]
https://abortioninafrica.wordpress.com/
Objectives

1. To understand why contraceptive and abortion-related care services are not used more fully by adolescents.

2. To understand the opportunities and barriers to scaling up the most effective implementation strategies for meeting adolescents' needs for contraception and abortion-related services.
Research questions

1: How, and to what extent, does context (legal and service provision) affect the implementation of contraception and abortion-related care services for adolescents?

2: Which implementation strategies are most acceptable and effective at facilitating adolescent access to contraception and abortion-related care services?

3: What are the projected effects, and feasibility, of scaling up adolescent access to contraception and abortion-related care services?
Why this study design?

✓ Compare across countries
  – Ethiopia vs Malawi vs Zambia

✓ Compare within countries
  – Tertiary vs youth friendly care
<table>
<thead>
<tr>

<th>Ethiopia</th>
<th>Zambia</th>
<th>Malawi</th>
</tr>
</thead>
<tbody>
<tr>
<td>Legal status</td>
<td>Rape, incest, physical or mental disabilities, to preserve a woman’s life or health, or if a woman is physically or mentally unprepared for childbirth</td>
<td>Rape, incest, defilement, risk of injury to physical/mental health of women or any of her existing children; foetal abnormalities. Account may be taken of the pregnant woman’s actual or reasonably foreseeable environment or her age</td>
<td>Legal only to save the life of the woman.</td>
</tr>
<tr>
<td>Service availability</td>
<td>Widely available in the public, private and NGO sectors.</td>
<td>Certification requires 3 doctors’ signatures. Some availability in 110 public sector facilities; limited availability in the private/ NGO sector</td>
<td>Limited availability in NGO franchises.</td>
</tr>
</tbody>
</table>

**Why these 3 countries?**
Facility-based interviews with adolescents [10-19y]

Why?
To establish which aspects of implementation act as a barrier or facilitator to adolescents’ use of contraception and SA/ PAC services.

How?
Facility-based recruitment of adolescents seeking either SA or PAC following an abortion initiated elsewhere.

Sample (≈110/country)
In each country, recruited adolescents seeking care at two public sector facilities (tertiary hospital vs. ASRHS). We focus on the public sector because it is where most vulnerable or marginalised adolescents seek care.
Adolescent interview focus

Using established two-interviewer approach:

– one RA will conduct the interview in a conversational style to put the participant at ease and facilitate the narrative flow, whilst a second RA will complete the research instrument.
– towards the end of the interview the second RA will ask supplementary questions not covered by the first RA to ensure completeness.

The research instrument generates evidence on:

• detailed care seeking pathways (and their influences and influencers)
• barriers to care-seeking (eg: knowledge, confidentiality, cost, transport, unofficial provider payments, perceived quality of care)
• sociodemographic status
• contraceptive (non-)use;
• direct service costs (for example, fees per procedure or intervention);
• indirect costs (e.g.: travel, food, lost productivity)
• resources used to pay costs (e.g.: credit, asset sale, borrowing, loss of wages)
• knowledge of the law, including understanding of adolescent rights to services
• barriers and facilitators to care-seeking
VERY TENTATIVE INSIGHTS

Delays in identifying pregnancy
Stigma
Denial
Non-disclosure
Fear
Un/planned
“But then I was still worried because that has never happened to me, I have never missed my periods. Then I asked my neighbour who is a nurse, she told me that I was pregnant and that I should tell my mother. I told her I couldn't do that because my mother wouldn't spare me [a beating].”
Knowledge about abortion
Whose decision?
Power
Coercion

- sex
- contraceptive non-/use
- pregnancy
- decision to abort
- abortion (safe/unsafe/legal/illegal)
"I was told that there was no way that I would take care of this child... I was asked how I would care for that child, where I would find clothes and how I would finish school? ... my father was very upset with me"
RESEARCHING ABORTION AND ADOLESCENTS
Treatment records

- Treatment records are accessed and anonymously copied, with permission, to validate individual reports of abortion care received and morbidity symptoms as a result of unsafe abortion procedures or attempts.

- Previously used in Zambia to generate evidence about pathways to care-seeking
Treatment records

• Treatment records are accessed and anonymously copied, with permission, to validate individual reports of abortion care received and morbidity symptoms as a result of unsafe abortion procedures or attempts.

• Previously used in Zambia to generate evidence about pathways to care-seeking
Research design

✓ Weekend recruitment
✓ Variable shift recruitment
✓ Trying not to exclude adolescents with disabilities
✓ 2 interviewer model
